Systems of Classification in Premodern Medical Cultures Ulrike Steinert 2020-07-21

Systems of Classification in Premodern Medical Cultures puts historical disease concepts in cross-cultural perspective, investigating perceptions, constructions and experiences of health and illness from antiquity to the seventeenth century. Focusing on the systematisation and classification of illness in its multiple forms, manifestations and causes, this volume examines case studies ranging from popular concepts of illness through to specialist discourses on it. Using philological, historical and anthropological approaches, the contributions cover perspectives across time from East Asian, Middle Eastern and Mediterranean cultures, spanning ancient Egypt, Mesopotamia, Greece and Rome to Tibet and China. They aim to capture the multiplicity of disease concepts and medical traditions within specific societies, and to investigate the historical dynamics of stability and change linked to such concepts. Providing useful material for comparative research, the volume is a key resource for researchers studying the cultural conceptualisation of illness, including anthropologists, historians and classicists, among others.

Living Translation Sonya Pritzker 2014-06-30 Integrating theoretical perspectives with carefully grounded ethnographic analyses of everyday interaction and experience, *Living Translation* examines the worlds of international translators as well as U.S. teachers and students of Chinese medicine, focusing on the transformations that occur as participants engage in a "search for resonance" with foreign terms and concepts. Based on a close examination of heated international debates as well as specific texts, classroom discussions, and interviews with publishers, authors, teachers, and students, Sonya Pritzker demonstrates the "living translation" of Chinese medicine as a process unfolding through interaction, inscription, embodied experience, and clinical practice. By documenting the stream of conversations that together constitute this

process, the book thus traces the translation of Chinese medicine from text to practice with an eye towards the social, political, historical, moral, and even personal dimensions involved in the transnational production of knowledge about health, illness, and the body.
