**Winning The War In Your Mind** Amoo O. Olaleye 2022-08-08 Have you ever found yourself wondering how you can improve your life, business, or relationship? Many times we become so caught up in the daily tasks and details of our lives that we forget to take a step back and look at the big picture. But one thing is certain, as long as you are alive, you are always improving. This is true for your career, your relationships, your health, your finances, and every single aspect of your life. You will always be improving. One of the main reasons why some people fail to achieve their goals and dreams is because they believe that it's not possible. They are convinced that the task is too big and impossible to be achieved. "The secret to success is getting started. The key to creativity is knowing how to hide your sources. And the courage to say what you think." If you are one of these people, I have great news for you. Our thoughts affect our decisions, so we should be conscious of the kind of thoughts that we think. Your mindset determines your success. If you think you are worthless, you will fail. If you think that you are worthless, your mind will block your potential. It will hinder you to achieve great things in your life. So, you should think that you are worthy and that you have potential. Think of yourself as a winner, not a loser. You should be positive about yourself. Believe that you can achieve whatever you want. You can make anything happen in your life if you believe in yourself. Just keep on going, and you will succeed. This is not just a "self-help" book. It is a practical, self-paced training program that teaches you how to apply these same techniques to anything you want to achieve. I'll walk you through the process step by step, as well as how to implement them in real-life situations.

**Investing in DeFi and NFT Projects on Alternative Blockchains** Dr.Liew Voon Kiong 2021-07-26 Since founded by Vitalik Buterin in 2014, Ethereum has quickly risen to become the number two cryptocurrency in the world with the potential to challenge Bitcoin's pole position in the future. The usage of Ethereum increased manyfold through the ICO wave that swept the whole world in 2017.

Though the ICO craze has subsided, the emergence of DeFi and NFT has created a second wave of Ethereum adoption as most DeFi and NFT platforms are built on the Ethereum blockchain. However, Ethereum-based platforms are increasingly facing scalability issues comprising high gas fees and network congestion. Blockchain developers have been trying to solve the Ethereum scalability trilemma by creating so-called layer 2 solutions that feature new consensus protocols like POS and BFT to replace the energy-driven and environmentally unfriendly POW. In recent years, many solutions were proposed to solve the scalability trilemma. Basically, the solutions can be categorized as layer 1 and layer 2. Layer 2 protocols are built on top of the Ethereum Mainnet while layer 1 protocols are completely new kinds of blockchain. Besides that, there are other protocols that cannot be classified as layer 1 or layer 2 solutions but rather as independent blockchains that run parallel to another layer 1 blockchain. One good example is Binance Smart Chain, which is not a layer 1 or layer 2 protocol, but a fork of the Ethereum blockchain. To help readers understand the core concepts of various solutions that attempt to solve the Ethereum scalability trilemma, the book provides detailed descriptions of various DeFi and NFT platforms that have been implemented based on these solutions. Additionally, readers will learn how to invest in these platforms to reap good rewards.

**Soft Computing for Business Intelligence** Rafael Espin 2013-12-30 The book Soft Computing for Business Intelligence is the remarkable output of a program based

on the idea of joint trans-disciplinary research as supported by the Eureka Iberoamerica Network and the University of Oldenburg. It contains twenty-seven papers allocated to three sections: Soft Computing, Business Intelligence and Knowledge Discovery, and Knowledge Management and Decision Making. Although the contents touch different domains they are similar in so far as they follow the BI principle "Observation and Analysis" while keeping a practical oriented theoretical eye on sound methodologies, like Fuzzy Logic, Compensatory Fuzzy Logic (CFL), Rough Sets and other soft computing elements. The book tears down the traditional focus on business, and extends Business Intelligence techniques in an impressive way to a broad range of fields like medicine, environment, wind farming, social collaboration and interaction, car sharing and sustainability.

Artificial Intelligence in Construction Engineering and Management Limao Zhang 2021-06-18 This book highlights the latest technologies and applications of Artificial Intelligence (AI) in the domain of construction engineering and management. The construction industry worldwide has been a late bloomer to adopting digital technology, where construction projects are predominantly managed with a heavy reliance on the knowledge and experience of construction professionals. AI works by combining large amounts of data with fast, iterative processing, and intelligent algorithms (e.g., neural networks, process mining, and deep learning), allowing the computer to learn automatically from patterns or features in the data. It provides a wide range of solutions to address many challenging construction problems, such as knowledge discovery, risk estimates, root cause analysis, damage assessment and prediction, and defect detection. A tremendous transformation has taken place in the past years with the emerging applications of AI. This enables industrial participants to operate projects more efficiently and safely, not only increasing the automation and productivity in construction but also enhancing the competitiveness globally.

**Military Nanotechnology** Jürgen Altmann 2007-05-07 With revolutionary changes in nanotechnology (NT) now on the horizon, many countries have started major research and development (R&D) programmes, which are mainly civilian. Often overlooked are military R&D programmes – in particular those of the US government. This is the first systematic and comprehensive presentation of the potential military applications of NT. In ten to twenty years, these applications may include extremely small computers, robots, missiles, satellites, launchers and sensors. They may also provide lighter and stronger materials for vehicles and weapons, implants in soldiers' bodies, metal-free firearms, autonomous fighting systems, and smaller chemical and biological weapons. These potential uses raise strong concerns. This assessment is made from a viewpoint of international security, considering the new criteria of dangers for arms control and the international law of warfare, dangers for stability through potential new arms races and proliferation, and dangers for humans and society. Some military applications, such as computers, will be so close to civilian uses that limits are impractical. Others, such as sensors for biological-warfare agents, may contribute to stronger protection against terrorist attacks and better verification of compliance with arms-control treaties. For preventive limitation of these new technologies, specific approaches are proposed that balance positive civilian uses and take into account verification of compliance, with a view to international peace and security, not national military strength. This book will be of great interest to scholars of military technology, non-lethal weapons, disarmament and security studies in general.

**Metaverse Made Easy** Dr. Liew Voon Kiong 2022-01-10 In recent months, the term metaverse has become the newest buzzword in the crypto and gaming space, and start-ups venturing into metaverse have been mushrooming around the globe. These start-ups were able to attract investments from angel investors and VCs. The biggest news this year was the direct listing of Roblox on the New York Stock Exchange in which the company's stock closed at \$69.50 per share, giving the company a market cap of \$38.26 billion. Another sensational story was Epic Games, the company that built Unreal Engine and the popular metaverse game Fortnite. At the time of writing, Epic Games has just completed a \$1 billion round of funding to support the long-term vision for the metaverse. But all these developments paled in comparison to Facebook changed its name to Meta on 29th Oct 2021, boldly announced its official entry into the metaverse. This was a game-changing milestone, which not only showed that Zuckerberg has continuously strengthened his worldview that "the metaverse is the next stop of the Internet", but also raised the metaverse to the same level of ambition as Musk's vision of colonizing Mars and Google's project to radically extend the human lifespan. Though metaverses have existed for more than two decades particularly in the gaming space like the famous Second Life, Fortnite, Roblox and more, it was neither widely known nor adopted outside the gaming industry. However, with the meteoric rise of the DeFi and NFT applications in the last two years, metaverse suddenly became a buzzword as metaverse platforms were mushrooming by integrating DeFi and NFT into GameFi to create sensational 3D VR experiences and allow users to monetize while playing (aka Play to Earn). Besides gaming, the latest trend shows that there is immense potential in business and commercial metaverse applications. Industries such as tourism, real estate, medicine, engineering, education, event

management, manufacturing, town planning and more could benefit greatly from Metaverse. As Metaverse is evolving fast, I have written this book to help you gain a better understanding of the metaverse as well as how to invest in metaverse projects to gain profits from NFT trading, DeFi staking and Play to Earn.
