De big reset Willem Middelkoop 2014-05-23 English edition: ISBN 9789048526000 In 2007 schreef Willem Middelkoop in Als de dollar valt dat het niet de vraag was óf ons financiële systeem zou instorten, maar wanneer. Het bleken profetische woorden. Eind 2008 waren we slechts een paar uur verwijderd van de complete ineenstorting van ons wereldwijde kredietkaartenhuis. In zijn nieuwste boek, De Big Reset: Gold Wars en het financiële eindspel, beschrijft Middelkoop de historie en problemen van ons huidige financiële systeem en onthult hoe we voor 2020 zullen overgaan naar een nieuw systeem. Goud heeft als enige valuta de afgelopen eeuwen haar koopkracht behouden. Bankiers proberen de vlucht naar goud al tientallen jaren af te remmen maar lijken deze War on Gold nu te verliezen. - Willem Middelkoop is oprichter van het Commodity Discovery Fund en publicist. Daarnaast is hij een veelgevraagd spreker en columnist. Hij verwierf landelijke bekendheid als marktcommentator bij RTLZ en als regelmatige gast van "De Wereld Draait Door" en "Pauw & Witteman". Middelkoop waarschuwde in zijn eerste boek "Als de dollar valt" (2007) voor een naderende kredietcrisis. In de jaren er na verschenen "De permanente oliecrisis" (2008) en "Overleef de kredietcrisis" (2009) en "Goud en het geheim van geld" (2012). In totaal verkocht hij meer dan 100.000 exemplaren van zijn boeken. <http://www.willem-middelkoop.nl>

International Economic Policies and Their Theoretical Foundations John M. Leticche 2014-06-28 The literature on international economics has become excessively specialized. In selecting distinguished readings for this source book--including contributions by Nobel laureates such as Lawrence R. Klein, Arthur Lewis, James Meade, and Theodore W. Schultz--Professor Leticche breaks the mold. The essays concentrate on interrelation between theory and actual policy design, and this collection of classic pieces and recent economic contributions are a valued resource in universities and government offices.

Asia Pacific Regionalism Ross Garnaut 1994 The Asia Pacific region has, in a relatively short space of time, become the hub of the world economy while at the same time moving towards closer economic integration. This book contains a selection of the articles that have emerged from analysis of the region over the last 20 years. The articles represent and convey the central ideas of Asia Pacific regionalism and describe the main historical, theoretical and political developments that they have grown from. Sections break the Asia-Pacific region into smaller areas, including the Americas, to look at causes, effects, problems and solutions in each. Also included is a chapter on the importance of Chinese reforms in an international context. This is an appropriate text for both students and lecturers.

Macroeconomics Errol D'Souza 2009-05 Errol D'Souza's Macroeconomics helps students realize the connections between theoretical frameworks and the actual behaviour of the economy; enables instructors to teach macroeconomics concepts within the context of both the Indian and global economy; and provides policymakers with material from current research in macroeconomics. The focus of the book rests on the analysis of macroeconomic thought in terms of the intuition and underlying logic that forms its basis. This book has been designed to help readers think independently about real-world situations, by helping them master the basic technical tools that enable them to do this. At a conceptual level, the book focuses on the most current and relevant issues, while also understanding the fluidity of the subject.

Foreign Direct Investment in South Asia Pravakar Sahoo 2013-10-01 During the 1990s, the governments of South Asian countries acted as 'facilitators' to attract FDI. As a result, the inflow of FDI increased. However, to become an attractive FDI destination as China, Singapore, or Brazil, South Asia has to improve the local conditions of doing business. This book, based on research that blends theory, empirical evidence, and policy, asks and attempts to answer a few core questions relevant to FDI policy in South Asian countries: Which major reforms have succeeded? What are the factors that influence FDI inflows? What has been the impact of FDI on macroeconomic performance? Which policy priorities/reforms needed to boost FDI are pending? These questions and answers should interest policy makers, academics, and all those interested in FDI in the South Asian region and in India, Pakistan, Bangladesh, Sri Lanka and Pakistan.

Foundations of Real-World Economics John Komlos 2019-01-11 The 2008 financial crisis, the rise of Trumpism and the other populist movements which have followed in their wake have grown out of the frustrations of those hurt by the economic policies advocated by conventional economists for generations. Despite this, textbooks continue to praise conventional policies such as deregulation and hyperglobalization. This textbook demonstrates how misleading it can be to apply oversimplified models of perfect competition to the real world. The math works well on college blackboards but not so well on the Main Streets of America. This volume explores the realities of oligopolies, the real impact of the minimum wage, the double-edged sword of free trade, and other ways in which powerful institutions cause distortions in the mainstream models.

Bringing together the work of key scholars, such as Kahneman, Minsky, and Schumpeter, this book demonstrates how we should take into account the inefficiencies that arise due to asymmetric information, mental biases, unequal distribution of wealth and power, and the manipulation of demand. This textbook offers students a valuable introductory text with insights into the workings of real markets not just imaginary ones formulated by blackboard economists. A must-have for students studying the principles of economics as well as micro- and macroeconomics, this textbook redresses the existing imbalance in economic teaching. Instead of clinging to an ideology that only enriched the 1%, Komlos sketches the outline of a capitalism with a human face, an economy in which people live contented lives with dignity instead of focusing on GNP.

Empirical International Trade Daniel M. Bernhofen 2010 In this volume, the author has selected an impressive range of critical papers by leading academics which have contributed significantly to making international trade an empirical science.

The Democracy Advantage Morton Halperin 2009-12-16 Reviewing 40 years of hard, empirical data, from China and India to Chile and Iraq, the authors show that poor democracies beat poor autocracies in every economic measure. In addition, the authors offer dramatic evidence that democracies are less likely to fight each other and that terrorists more often find safe haven in authoritarian countries such as Egypt, Saudi Arabia, and Pakistan.

Developing Countries and the Feldstein-Horioka Puzzle Mr. Athanasios Vamvakidis 1998-01-01 The previous literature points to a high correlation between domestic rates of investment and savings among OECD countries. Some take this as evidence of limited financial integration in the industrialized world. This paper presents new empirical results, based on an extended sample of countries. The correlation coefficient in a regression of the rate of domestic investment on the rate of domestic savings is statistically insignificant most of the time and generally smaller than 0.3 for any sample other than the OECD. This finding is robust with respect to alternative time periods, subsample and estimation methods. In particular, we control for measurement error, business cycle effects, and country-specific fixed effects.

Foreign Investment in Developing Countries H. Kehal 2004-11-10 This volume examines foreign investment in developing countries both from a theoretical perspective and country specific perspective. It covers strategies to maximize the benefits that draw from the inward investment flow as well as examining foreign investment as a vehicle for international economic integration. The book focuses on foreign investment in the third and fourth largest economies of the world - the Peoples Republic of China and India - in addition to Indonesia, Malaysia and other countries.

Regionalism and Rivalry Jeffrey A. Frankel 2007-12-01 As Japan's newfound economic power leads to increased political power, there is concern that Japan may be turning East Asia into a regional economic bloc to rival the U.S. and Europe. In *Regionalism and Rivalry*, leading economists and political scientists address this concern by looking at three central questions: Is Japan forming a trading bloc in Pacific Asia? Does Japan use foreign direct investment in Southeast Asia to achieve national goals? Does Japan possess the leadership qualities necessary for a nation assuming greater political responsibility in international affairs? The authors contend that although intraregional trade in East Asia is growing rapidly, a trade bloc is not necessarily forming. They show that the trade increase can be explained entirely by factors independent of discriminatory trading arrangements, such as the rapid growth of East Asian economies. Other chapters look in detail at cases of Japanese direct investment in Southeast Asia and find little evidence of attempts by Japan to use the power of its multinational corporations for political purposes. A third group of papers attempt to gauge Japan's leadership characteristics. They focus on Japan's "technology ideology," its

contributions to international public goods, international monetary cooperation, and economic liberalization in East Asia.

Globalisation and Productivity Growth H. Görg 2005-12-15 A great deal of public policy is harnessed to raising productivity growth. Although it is believed that the process is intimately linked to globalization, the precise links are less well known. This volume offers a comprehensive overview of links between international trade, foreign direct investment and productivity growth, providing a series of empirical analyses of these links.

International Trade Theory Edward E. Leamer 1994 Abstract: This paper provides a critical look at recent empirical work in international trade theory. The paper addresses the issue of why empirical work in international trade has perhaps not been as influential as it could have been. The paper also provides several suggestions on directions for future empirical research in international trade.

National Saving and Economic Performance John B. Shoven 2009-02-15 The past decade has witnessed a decline in saving throughout the developed world—the United States has the dubious distinction of leading the way. The consequences can be serious. For individuals, their own economic security and that of their families is jeopardized. For society, inadequate rates of saving have been blamed for a variety of ills—decreasing the competitive abilities of American industry, slowing capital accumulation, increasing our trade deficit, and forcing the sale of capital stock to foreign investors at bargain prices. Restoring acceptable rates of saving in the United States poses a major challenge to those who formulate national economic policy, especially since economists and policymakers alike still understand little about what motivates people to save. In *National Saving and Economic Performance*, edited by B. Douglas Bernheim and John B. Shoven, that task is addressed by offering the results of new research, with recommendations for policies aimed to improve saving. Leading experts in diverse fields of economics debate the need for more accurate measurement of official saving data; examine how corporate decisions to retain or distribute earnings affect household-level consumption and saving; and investigate the effects of taxation on saving behavior, correlations between national saving and international investment over time, and the influence of economic growth on saving. Presenting the most comprehensive and up-to-date research on saving, this volume will benefit both academic and government economists.

Adjusting to EU Enlargement Constantine A. Stephanou 2006-01-01 Before the latest EU enlargement substantial changes in the integration process were predicted as a result of the accession of 10 new member states, with some forecasting cataclysmic consequences. This book, the first ex post assessment of EU enlargement, provides evidence to the contrary, while also providing examples in which the new members have been able to influence the EU policy output with their liberal attitudes on economic and social policy.

The Clash of Liberalizations: Preferential Versus Multilateral Trade Liberalization in the European Union. Nuno Limão, Baybars Karacaovali 2005

Unleashing Social Justice through EU Public Procurement Antoinette Calleja 2015-10-05 The dramatic results of the 2014 European Parliament elections have highlighted the European Union's urgent need for a review of the scope and purpose of its social objectives and for a reordering of European priorities. This book advocates a radical and original alternative to the current philosophy that determines the set of rules for the awarding of EU public procurement contracts. It calls for a reordering of the EU's economic and social priorities. In doing so, it advocates for a social dimension to be placed at the core of public procurement, which could elicit a social model of integration in the EU in which the European citizen is the key actor. This is achieved through an analytical approach as well as concise and contextualised explanations relating to free trade theories, poverty and public interest theories. This book will be of key interest to students and scholars of the European Union, political theory, and EU law.

The Regulation of International Trade, Volume 1 Petros C. Mavroidis 2016-02-19 A detailed examination of

the GATT regime for international trade, discussing the negotiating record, policy background, economic rationale, and case law. The General Agreement on Tariffs and Trade (GATT) was created alongside other towering achievements of the post-World War II era, including the United Nations, the World Bank, and the International Monetary Fund. GATT, the first successful agreement to generate multilateral trade liberalization, became the principal institution to administer international trade for the next six decades. In this book, Petros Mavroidis offers detailed examination of the GATT regime for international trade, discussing the negotiating record, policy background, economic rationale, and case law. Mavroidis offers a substantive first chapter that provides a detailed historical background to GATT that stretches from the 1927 World Economic Conference through Bretton Woods and the Atlantic Charter. Each of the following chapters examines the disciplines agreed to, their negotiating record, their economic rationale, and subsequent practice. Mavroidis focuses on cases that have influenced the prevailing understanding of the norm, as well as on literature that has contributed to its interpretation, and the final outcome. In particular, he examines quantitative restrictions and tariffs; the most favored nation clause (MFN), the cornerstone of the GATT edifice; preferential trade agreements and special treatment for products originating in developing countries; domestic instruments; and exceptions to the obligations assumed under GATT. This book's companion volume examines World Trade Organization (WTO) agreements regulating trade in goods.

World Development Report 2009 World Bank 2008-11-04 Rising densities of human settlements, migration and transport to reduce distances to market, and specialization and trade facilitated by fewer international divisions are central to economic development. The transformations along these three dimensions density, distance, and division are most noticeable in North America, Western Europe, and Japan, but countries in Asia and Eastern Europe are changing in ways similar in scope and speed. 'World Development Report 2009: Reshaping Economic Geography' concludes that these spatial transformations are essential, and should be encouraged. The conclusion is not without controversy. Slum-dwellers now number a billion, but the rush to cities continues. Globalization is believed to benefit many, but not the billion people living in lagging areas of developing nations. High poverty and mortality persist among the world's 'bottom billion', while others grow wealthier and live longer lives. Concern for these three billion often comes with the prescription that growth must be made spatially balanced. The WDR has a different message: economic growth is seldom balanced, and efforts to spread it out prematurely will jeopardize progress. The Report: documents how production becomes more concentrated spatially as economies grow. proposes economic integration as the principle for promoting successful spatial transformations. revisits the debates on urbanization, territorial development, and regional integration and shows how today's developers can reshape economic geography.

Creating a Learning Society Joseph E. Stiglitz 2015-10-06 "A superb new understanding of the dynamic economy as a learning society, one that goes well beyond the usual treatment of education, training, and R&D."—Robert Kuttner, author of *The Stakes: 2020 and the Survival of American Democracy* Since its publication *Creating a Learning Society* has served as an effective tool for those who advocate government policies to advance science and technology. It shows persuasively how enormous increases in our standard of living have been the result of learning how to learn, and it explains how advanced and developing countries alike can model a new learning economy on this example. *Creating a Learning Society: Reader's Edition* uses accessible language to focus on the work's central message and policy prescriptions. As the book makes clear, creating a learning society requires good governmental policy in trade, industry, intellectual property, and other important areas. The text's central thesis—that every policy affects learning—is critical for governments unaware of the innovative ways they can propel their economies forward. "Profound and dazzling. In their new book, Joseph E. Stiglitz and Bruce C. Greenwald study the human wish to learn and our ability to learn and so uncover the processes that relate the institutions we devise and the accompanying processes that drive the production, dissemination, and use of knowledge . . . This is social science at its best."—Partha Dasgupta, University of Cambridge "An impressive tour de force, from the theory of the firm all the way to long-term development, guided by the focus on knowledge and learning . . . This is an ambitious book with far-reaching policy implications."—Giovanni Dosi, director, Institute of Economics, Scuola Superiore Sant'Anna "[A] sweeping work of macroeconomic theory."—Harvard Business Review

International Finance Dilip Das 2003-09-02 In this updated fourth edition, author Maurice Levi successfully integrates both the micro and macro aspects of international finance. He successfully explores managerial issues and focuses on problems arising from financial trading relations between nations, whilst covering key topics such as: * organization of foreign exchange markets * determination of exchange rates * the fundamental principles of international finance * foreign exchange risk and exposure * fixed and flexible exchange rates. This impressive new edition builds and improves upon the popular style and structure of the original. With new data, improved pedagogy, and coverage of all of the main developments in international finance over the last few years, this book will prove essential reading for students of economics and business.

A Test of the Economic Base Hypothesis in the Small Forest Communities of Southeast Alaska

Guy C. Robertson 2003 Recent harvest declines in the Western United States have focused attention on the question of economic impacts at the community level. The impact of changing timber-related economic activity in a given community on other local activity and the general economic health of the community at large has been a persistent and often contentious issue in debates surrounding forest policy decisions. The economic base hypothesis, in which changes in local export-related economic activity are assumed to cause changes in economic activity serving local demand, is a common framework for understanding impacts of forest policy decisions and forms the basis of models commonly used to provide estimates of expected local impacts under different policy options. This study uses community-specific, time-series employment data to test the economic base hypothesis in the small, semi-isolated communities of southeast Alaska. Estimates were derived for each of 15 communities. Export-related activity was not found to cause changes in economic activity serving local demand for the average community. However, the results indicated statistically significant differences among communities in their response to shocks in export related activity. The implications of these results for policy, and for the theory and practice of modeling economic impacts at small spatial scales, are explored in the final sections of this study. Specifically, secondary economic impacts cannot be taken as a foregone conclusion in policy analysis, and the fundamental assumptions of static impact modeling approaches deserve greater scrutiny.

The Democracy Advantage Morton H. Halperin 2005 For decades, policies pursued by the U.S. and other industrialized nations towards the developing world have been based on a dirty little secret kept among policy experts: that democracy and poor countries don't mix. Turning this long-held view on its head, *The Democracy Advantage* makes a bold case that they do. In this timely and path-breaking book. Morton H. Halperin, Joseph T. Siegle, and Michael M. Weinstein dismantle the conventional wisdom that democratic reforms are destabilizing and that the West must rely on authoritarian regimes in order to create a middle class that will support democracy.

International Economics Dennis R. Appleyard 1998 This is a paperback volume taken from the successful hardcover mid-level *International Economics* textbook. Global Finance Walden Bello 2000-10 Leading thinkers, from both North and South, confront what is to be done about the clearly unstable world economic system. They examine a range of different ideas and

approaches including: how do we renew the process of governance of the global economy?; can the IMF be reformed?; do we need a new World Financial Authority?; is there a case for capital controls?; can an international bankruptcy procedure be set up for countries, modelled on the USA's own domestic Chapter 11?; could the Tobin Tax on foreign currency transactions be part of the solution?; and what effective measures are needed to relieve the most deeply indebted countries?

Global Financial Stability Report, September 2003 International Monetary Fund. Monetary and Capital Markets Department 2003-09-04 This September 2003 issue of the Global Financial Stability Report highlights that since March 2003, further progress has been made in addressing the lingering effects of the bursting of the equity price bubble. Household and corporate balance sheets have continued to improve gradually and corporate default levels have declined. Companies in mature markets have cut costs, enhancing their ability to cope with slower growth and other potential difficulties. Corporations—particularly in the United States—have made good progress in their financial consolidation efforts and are in a better financial position to increase investment spending.

Strategic Reconfigurations Stuart Wall 2010-01-01 In a world of ever increasing talent and ever more rapid creation of new knowledge, and in a world that is growing in complexity by the day, it is truly intriguing to learn of capabilities for success and failure in rapid innovation-based industries. The fusion of academic concepts and empirical insights make this book a source of inspiration for inquiring managers. Norbert

Walter, Chief Economist of Deutsche Bank and CEO of Deutsche Bank Research, Germany This volume represents a most welcome and important contribution to the emergent and fast-growing dynamic capabilities view (DCV) of the firm and sustainable competitive advantage. It simultaneously helps to assess critically, integrate with a wide range of other perspectives, broaden the scope, and deepen the conceptual foundations of the DCV. In addition and importantly, it links DCV to, and contrasts it with, managerial practice. The authors dispassionate approach is a further plus. The editors have done an excellent job and should be congratulated for this work that should be a must-read. Christos Pitelis, Reader in International Business and Competitiveness, University of Cambridge, UK This path-breaking book provides unique insights into the organisational realities of strategic reconfigurations in uncertain markets, thus advancing the dynamic capability perspective. Dynamic capabilities continue to excite academics. It is a perspective that promises explanations of competitive advantage, but its full potential remains somewhat hidden behind abstract notions. This eloquent volume seeks to overcome the challenge by combining the theory and practice of organisational resource configurations. Joint contributions by expert academics and business executives demystify, but also confirm, elements of the theory. Thus, the book integrates dynamic capabilities with organisational realities as well as with adjacent theories of strategic innovation and entrepreneurship. Strategic Reconfigurations provides a guide to strategic management in turbulent times, for students, researchers, and professionals alike. Business executives in high-velocity markets will find the book invaluable.
