Regulation of Health: Case Studies of Sweden and Switzerland Peter Zweifel 2012-12-06 Health care arguably is the single most regulated industry in industrial countries, and possibly in newly industrialized and developing countries as well. But what exactly is being regulated, what are the instruments used, and what are the effects and side-effects of such regulation? *Regulation of Health: Case Studies of Sweden and Switzerland* seeks to resolve problems in answering these key questions regarding the health care sector in two countries - Sweden and Switzerland. The volume contains a series of studies that compare the regulation of health and health care in these two apparently very similar countries, in considerable detail. The contributing teams acquired a great deal of knowledge about health regulation in both countries; they also derived comparative predictions when regulation differs, using actual observations to check whether these predictions are borne out. These comparisons are based on the conditions prevailing in the mid-nineties.

Organisational Behaviour Ian Brooks 2009 A succinct, lively and robust introduction to the subject of OB that offers clear, focussed coverage of the most important topics in an accessible way. Brooks et al aims to encourage critical examination of the theory of organisational behaviour whilst also enabling students to interpret and deal with real organisational problems. It has proved a popular student choice because it combines relative brevity with thorough coverage and plentiful real-world examples. This book is particularly well-suited to short or introductory courses or those requiring a concise but broad introduction to organisational behaviour.

Chiral Pollutants Imran Ali 2005-07-15 Today, among the various chiral discrimination methods, chromatography and capillary electrophoresis techniques have become powerful tools in environmental analysis.

Therefore, there is a need to describe the art of the determination of the chiral pollutants in the environmental matrices. This book provides the complete information on the types of the chiral pollutants, their toxicities and methods of determination by chromatography and capillary electrophoresis.

Energy Performance of Residential Buildings Mat Santamouris 2010-09-23

Energy Rating is a crucial consideration in modern building design, affirmed by the new EC Directive on the energy performance of buildings. Energy represents a high percentage of the running costs of a building, and has a significant impact on the comfort of the occupants. This book represents detailed information on energy rating of residential buildings, covering: * Theoretical and experimental energy rating techniques: reviewing the state of the art and offering guidance on the in situ identification of the UA and gA values of buildings. * New experimental protocols to evaluate energy performance: detailing a flexible new approach based on actual energy consumption. Data are collected using the Billed Energy Protocol (BEP) and Monitored Energy Protocol (MEP) *

Energy Normalization techniques: describing established methods plus a new Climate Severity Index, which offers significant benefits to the user. Also included in this book are audit forms and a CD-ROM for applying the new rating methodology. The software, prepared in Excel, is easy to use, can be widely applied using both deterministic and experimental methods, and can be adapted to national peculiarities and energy policy criteria.

Energy Performance of Residential Buildings offers full and clear treatment of the key issues and will be an invaluable source of information for energy experts, building engineers, architects, physicists, project managers and local authorities. The book stems from the EC-funded SAVE project entitled EUROCLASS. Participating institutes included: * University of Athens, Greece * Belgium Building Research Institute, Belgium * University of Seville, Spain * Royal Institute of Technology, Sweden

A Cultural Journey through the English Lexicon Roberto Facchinetti
2012-01-17 This book is a metaphorical journey through the English lexicon, viewed as a vehicle and a mirror of cultural identity. From the translatability of phrases and metaphors to genre-specific terms, from English as a Lingua Franca to English language teaching, the studies collected here testify to the fact that in English – and overall in language – word contextualization or lack of contextualization impinges on linguistic utterances and leads to differing interpretations of the textual message. The book may be of interest to a wide range of scholars and students who are concerned with the study of the English lexicon, bearing in mind that this lexicon provides the bricks of any language, and language, in turn, needs the cornerstone of Culture to stand firmly and thrive.

Politics of Segmentation Georg Picot 2013-06-17 When political parties make policy decisions they are influenced by the competition they face from other parties. This book examines how party competition and party systems affect reforms of social protection. Featuring a historical comparison of Italy and Germany post-1945, the book shows how a high number of parties and ideological polarisation lead to fragmented and unequal social benefits. Utilising a comparative approach, the author brings together two important issues in welfare state research that have

been insufficiently investigated. Firstly, the complex influence of party competition on social policy-making, and second, how some social groups enjoy better social protection than others. Moving beyond the two countries of the case study, the book proposes an innovative framework for studying segmentation of social protection and applies this framework to a wider set of 15 advanced welfare states. Overall, this book draws together different strands of research on political parties and on welfare states, and introduces a new argument on how party politics shapes social policy. An invaluable text on the political economy of the welfare state, *Politics of Segmentation* will be of interest to scholars of political economy, social policy and comparative politics.

Strong Governments, Precarious Workers Philip Rathgeb 2018-12-15 Why do some European welfare states protect unemployed and inadequately employed workers ("outsiders") from economic uncertainty better than others? Philip Rathgeb's study of labor market policy change in three somewhat-similar small states—Austria, Denmark, and Sweden—explores this fundamental question. He does so by examining the distribution of power between trade unions and political parties, attempting to bridge these two lines of research—trade unions and party politics—that, with few exceptions, have advanced without a mutual exchange. Inclusive trade unions have high political stakes in the protection of outsiders, because they incorporate workers at risk of unemployment into their representational outlook. Yet, the impact of union preferences has declined over time, with a shift in the balance of class power from labor to capital across the Western world. National governments have accordingly prioritized flexibility for employers over the social protection of outsiders. As a result, organized labor can only protect outsiders when governments are reliant on union consent for successful consensus mobilization. When governments have a united majority of seats, on the other hand, they are strong enough to exclude unions. *Strong Governments, Precarious Workers* calls into question the electoral responsiveness of national governments—and thus political parties—to the social needs of an increasingly numerous group of precarious workers. In the end, Rathgeb concludes that the weaker the government, the stronger the capacity of organized labor to enhance the social protection of precarious workers.

Working Poverty in Europe N. Fraser 2011-06-13 Offering a comparative perspective, this book examines working poverty - those in work who are still classified as 'poor'. It argues that the growth in numbers of working poor in Europe is due to the transition from a Keynesian Welfare State to a 'post-fordist' model of production.

Health Care and Cost Containment in the European Union Elias Mossialos

2019-05-20 First published in 1999, this volume aims to describe and analyse the experience of cost containment in Europe over the last fifteen years in order to understand that experience and to determine, as best we can, which methods were successful and which were not. Part I provides an overview of healthcare in the European Union, an overview of recent expenditure trends. Part II complements the first, examining in detail cost containment policies in each EU Member State. The country-based chapters refer to developments up to mid-1997.

Unemployment and related welfare benefits help prevent those without work from falling into poverty but can at the same time reduce the incentive to work; this is one of the main dilemmas of social policy.

Neck-specific exercise with or without a behavioural approach, or prescription of physical activity in chronic whiplash associated disorders

Maria Landén Ludvigsson 2016-04-05 Background: Although 50% of those who suffer a whiplash injury still report neck pain after one year, there is a lack of knowledge about effective treatment for chronic whiplash associated disorders (WAD). Exercise is potentially useful, but the response to exercise in chronic WAD is highly variable between individuals and factors associated with good outcomes as well as the cost-effectiveness are unknown. Aim: The general aim of this thesis was to evaluate the effect on self-reported disability/ functioning, pain and self-efficacy of three different exercise interventions in chronic WAD grade 2 and 3, and to determine the cost-effectiveness of these interventions.

Material and methods: A total of 216 participants with chronic WAD took part in this randomized, assessor blinded, controlled, clinical trial.

Participants were randomized to either neck-specific exercise without (NSE), or with a behavioural approach (NSEB), or prescription of physical activity (PPA) for 12 weeks. Evaluations of change scores and proportion of clinically relevantly improved participants regarding disability/functioning (Neck Disability Index (NDI)/Patient Specific Functional Scale (PSFS)),

pain (Visual Analogue Scale of current neck pain (VAS-P), pain bothersomeness (VAS-B)) and Self-efficacy (Self-Efficacy Scale (SES)) were made after 3, 6, 12 and 24 months. Secondary analyses were made, regarding factors associated with clinically relevant improvements in disability, pain and regarding cost-effectiveness. Results: Disability was more improved in the NSE/NSEB groups (NDI, $P=0.02$) than the PPA group, which reported no improvement, at 3 and 6 months, results remaining at 12 and 24 months ($p \leq 0.02$). Functioning (PSFS) was also more improved in the NSE/NSEB groups than the PPA group at 3 months, in the NSEB compared to the PPA group at 6 months, and the NSE compared to the PPA groups at 12 and 24 months. The proportion of participants reaching clinically relevant improvement regarding NDI and PSFS was also larger in the NSE/NSEB groups at all time points ($P<0.05$), except NDI at 3 months and PSFS at 24 months. There were no differences between groups in VAS-P, VASB or SES change scores. The proportion of participants with clinically relevant reduction in VAS-P and VAS-B was however higher ($P<0.02$) in the NSE/NSEB groups compared with the PPA group at 3 and 12 months. Self-efficacy was only improved in the NSE group but without any between-group differences. There were no significant differences in any outcomes between the NSE/NSEB groups. The only significant factor associated with both clinically relevant improvements in disability and neck pain both at 3 and 12 months was participation in the NSE group, with odds up to 5.3 times higher than in the PPA group. Different baseline features were associated with the improvements depending on the outcome and time point examined. From a societal perspective, NSE was the cost-effective option. Conclusion: Physiotherapist-led neck-specific exercise resulted in better outcomes than prescription of physical activity regarding disability, functioning, and pain. The observed benefits of adding a behavioural approach to neck-specific exercise were inconclusive, and NSE was the cost-effective option from a societal perspective. Factors associated with clinically relevant improvements after exercise interventions in chronic WAD differed whether disability or neck pain was the outcome, but also differed in the short and long term. Participation in the NSE group was the only factor associated with both outcomes after both 3 and 12 months.

The Complexity Turn Arch G. Woodside 2017-02-16 This book takes the reader beyond net effects and main and interaction effects thinking and methods. Complexity theory includes the tenet that recipes are more

important than ingredients—any one antecedent (X) condition is insufficient for a consistent outcome (Y) (e.g., success or failure) even though the presence of certain antecedents may be necessary. A second tenet: modeling contrarian cases is useful because a high or low score for any given antecedent condition (X) associates with a high Y, low Y, and is irrelevant for high/low Y in some recipes in the same data set. Third tenet: equifinality happens—several recipes indicate high/low outcomes.
